

## Adding years of birth to user profiles

When adding dates of birth to the user profiles it appears that you can only put in a birth year as far back as 2006.

The screenshot shows a user profile form with the following fields: Date of birth, National insurance number, Unique learner/user number, Gender (set to 'Not specified'), Home postcode, Address line 1, and Address line 2. A calendar overlay is displayed over the 'Date of birth' field, showing the month of September and the year 2016. The calendar grid shows dates from 2006 to 2025, with 2016 highlighted in blue and 2017 highlighted in yellow.

By selecting 2006 the calendar then resets and allows you to select a date 10 years further back.

The screenshot shows the same user profile form as above. The calendar overlay is now set to the year 2006. The calendar grid shows dates from 1996 to 2015, with 2006 highlighted in blue and 2007 highlighted in yellow.

Please continue to do this until you find the appropriate year of birth for your user.
