

Compatibility

VQManager has exceptional compatibility on two levels.

1) Accessing VQManager from a computer - VQManager has been designed to be fully compatible with both IOS and Windows-based platforms. It can be accessed through all the major browsers, including Internet Explorer, Safari, Google Chrome, Mozilla and many others.

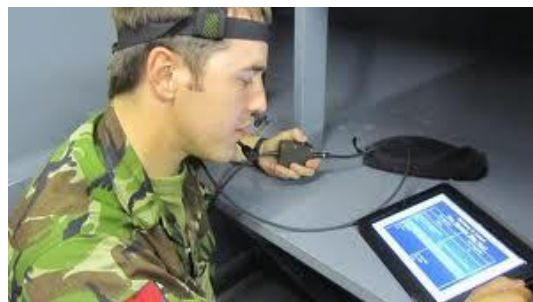

2) VQManager also has an off-line application, VQMobile which has been designed to run on hand-held devices such as iPads, iPhones, Galaxies and other tablets. This is compatible with all Apple (IOS) products, and the majority of Android products (such as Samsung Galaxy etc). The off-line application provides a crucial advantage when evidence might need to be gathered 'in the field'.

Whilst many organisations understand the numerous advantages of using an e-portfolio to manage their NVQ and apprenticeship programmes, how does that work if learners and assessors are working in a challenging or hostile environment?

A challenging environment may be defined as one where perhaps a laptop is too *cumbersome*, where the users are subjected to the *elements* or where *connectivity* is patchy or non-existent.

Examples of these environments can include kitchens, truck cabs, underground basements, rural and military locations.

Recording devices

A simple solution may be to use a robust device to record the evidence *in situ*, and then process it later in a more convenient location.

SkillWise has successfully tested:

- Voice recorders
- Digital still and video cameras
- Electronic notepads
- Electronic smart pens

We will gladly provide more information about such devices – please just ask.

VQMobile offers almost all of the functionality of the desktop version, and is designed to run on tablets such as Apple's iPad, Galaxy's Note and other tablets.

It operates in an off-line mode, meaning that it can be used in any location irrespective of connectivity - synchronising data with VQManager whenever the user regains connectivity

On-line or off-line, **VQMobile** offers access to:

- ✓ Full learner specific information including their assessment plans
- ✓ Full reporting capability to demonstrate progress
- ✓ Easy evidence uploading through a very intuitive interface, making use of the tablet's own recording/imaging applications
- ✓ Full mapping capability to match evidence against assessment criteria
- ✓ Activity log
- ✓ User-prompted synchronisation with VQManager

VQMobile is freely available to download to your tablet from the AppStore and PlayStore
