

## Date fields

We have had to prevent users from typing dates manually into date fields. This is to ensure that a valid calendar date is always entered. Invalid dates cause major errors in the system, leading to pages crashing and problems with reports, so we felt this was the best solution to this problem. (Some users will need to force a 'hard refresh' of their browser by pressing Ctrl and F5 together to see this change)

The screenshot shows a web interface with two date input fields. The first field is labeled "Date certificate received" and has a tooltip above it that says "Enter the date that the learner's certificate was received from the awarding body". The second field is labeled "Date sent certificate to learner". A calendar pop-up is open over the first field, showing the month of November 2014. The date 3 is highlighted in yellow. Below the date fields is a section titled "Learner framework assignments" which contains a table with columns for "Frameworks", "End date", and "Assign framework".

Frameworks	End date	Assign framework
Team leading (102)	03/03/2014	<input type="checkbox"/>
test framework (108)	01/05/2014	<input type="checkbox"/>
